Cell Phones and Breast Cancer

Medical Case Reports are accumulating of young women with unusually located breast cancers developing under the antennas of cell phones stored in their bras.

Cell Phones emit microwave radiation. Manufacturers instruct that phones should not be kept directly next to breast tissue or the body.

Know how to reduce your exposure.

Doctors recommend

1. Women Should Not Store Cell Phones In Bras

2. Practice Safe Phone

Distance the phone from your head and body. Use a speakerphone or a headset.

3. Protect Your Fertility

Turn wireless devices OFF before they are near reproductive organs or a pregnant woman's abdomen.

4. Practice Safe Tech

Set devices to Airplane mode ON and Wi-Fi OFF to stop the radiation. Instead of Wi-Fi, prefer non-wireless corded connections for data, voice, and images.

Save the Boys!

The Facts:

Cell Phones emit microwave radiation.

Research shows:

- Damaged Sperm
- Reduced Sperm Count
- Erectile Dysfunction

Read the Fine Print: All wireless device manufacturers advise that devices should be a distance away from human bodies and brains because of the radiation.

Know how to reduce your exposure.

Doctors recommend

1. Protect Your Body

Turn the Power OFF on any wireless device before placing it in a pocket, pants, bra or near your body. Do not put a powered wireless laptop or tablet on your lap.

2. Protect Your Brain

Distance the phone from your head and body. Use a speakerphone or a headset.
